

DetoxTM HM

PRODUCT SHEET

PRODUCT DESCRIPTION:

Toxic heavy metals like lead, mercury, arsenic, aluminum, are everywhere. They are in our food, water, workplace, schools, air, and are unavoidable. Regardless of where you live, almost everyone has been exposed to these heavy metal toxins that are retained in our body. Most people do not realize that human's do not have an adequate mechanism to remove heavy metals like lead. Calcium Disodium EDTA chelation therapy is a proven process to remove heavy metals like lead from the body. DetoxHM's lower dose, EDTA chelation therapy wellness cream is easy to apply, gentle, effective, and safe for all ages.

PRIMARY BENEFITS:

DetoxHM uses EDTA (ethylenediaminetetraacetic acid) which is a heavy metal binding agent. It binds with and helps the body eliminate toxic heavy metals like lead, mercury, arsenic, aluminum and cadmium. EDTA functions best when introduced into the body without passing through the digestive system, specifically the stomach where stomach acid can render the EDTA ineffective. DetoxHM is introduced transdermally providing up to 90%+ EDTA absorption into your body.

ACTIVE & IN-ACTIVE INGREDIENTS:

Active ingredient:

Calcium Disodium EDTA (Ethylenediaminetetraacetic acid)

Inactive ingredients: Water, glycerin, jojoba oil, shea butter, mango butter, and emulsifiers. Contains no perfumes, no fillers and no dyes.

Product Name:	DetoxHM
Product Type:	Heavy metal binding & detoxification cream
Product Strength:	450mg. CaNa ₂ EDTA
Product Size:	8oz. (240ml.) Jar
Serving Size:	7.5ml or 1 1/2 teaspoons
Servings per Jar:	24

ADDITIONAL INFORMATION:

These statements have not been evaluated by the FDA and are not intended to diagnose, treat or cure any disease. Always check with your physician before starting a new botanical extract, medicinal herb, or dietary supplement program.

DIRECTIONS FOR USE:

Massage 1 1/2 teaspoons of DetoxHM into a thin skinned, low fat area of your body such as inner part of arms, side of torso, inner thigh or upper chest. You will know the cream is completely absorbed when the cream being applied on the skin changes from white to clear.

Suggested use: One application daily for 5 days on and 2 days off. This will make the jar last approximately one month. It is recommended to clean the area of skin where you will be applying DetoxHM prior to use.

PRECAUTIONS:

There are a few things to keep in mind when starting, using, and finishing your EDTA Chelation therapy treatment. EDTA Chelation removes toxic lead & heavy metals but also removes some minerals your body needs. This requires you to take a supplementary mineral supplement to replace the good minerals taken out.

To aid in this, we have a quality mineral supplement available but most over the counter supplement are acceptable. This must be part of your therapy to insure maximum results. EDTA Chelation is not a one-time treatment or cure. At a minimum, you must use DetoxaHM for 3-6 months to achieve desired results. Because everyone is exposed to heavy metals on a daily-basis, EDTA Chelation therapy should be viewed as an annual routine and ultimately as you get older, a daily-routine.

Warning: Remove the tamper seal before using. Do not use if tamper seal has been broken. Keep away from children, do not use if pregnant or nursing, or have sensitive skin.
